

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) An assembly comprising three telecommunications modules each having an equal number of contacts for connecting wires at a front side of the modules therewith, the assembly further comprising splitter circuits, wherein the assembly is open at a rear side and configured to receive the splitter circuits at the rear side thereof and wherein[[.]] the number of splitter circuits being equal to half of the number of contacts of each module, one third of the contacts of the assembly being adapted configured to transmit a line signal, one third of the contacts of the assembly being adapted configured to transmit a POTS signal, and one third of the contacts of the assembly being adapted configured to transmit a DSLAM-signal.
2. (Previously Presented) The assembly according to claim 1 wherein all contacts of one module are adapted to transmit DSLAM-signals.
3. (Previously Presented) The assembly according to claim 2 wherein the module having contacts all of which are adapted to transmit a DSLAM-signal is arranged between the two other modules.
4. (Previously Presented) The assembly according to claim 1 wherein half of the contacts of at least one module are adapted to transmit a line signal and a remaining half of the contacts of this module are adapted to transmit a POTS signal.
5. (Previously Presented) The assembly according to claim 1 wherein the splitter circuit has three pairs of two contacts which are connected with the contacts of the telecommunications modules.
6. (Previously Presented) The assembly according to claim 1 further comprising at least one carrier, the modules being attachable to the carrier and adapted to allow swiveling of the modules with regard to the carrier.

7. (Previously Presented) The assembly according to claim 6 wherein the carrier is at least partially open at a side opposite the attachment to the carrier.

8. (Previously Presented) The assembly according to claim 6 further comprising an adapter at the least partially open side of the carrier which connects the module with the carrier.

9. (Cancelled)

10. (Cancelled)

11. (Currently Amended) The assembly module according to claim [[9]] 16 further comprising an attachment extension at a side opposite of the attachment system of the module.

12. (Previously Presented) The assembly according to claim 1 in combination with a rack or a cabinet, which includes the carrier.

13. (Previously Presented) The assembly according to claim 1 in combination with a DSLAM.

14. (New) The assembly according to claim 11 further comprising one or more splitter circuits attached to the rear side of the assembly.

15. (New) The assembly according to claim 14 wherein the splitter circuits are arranged in two rows and disposed in a mirror image arrangement.

16. (New) The assembly according to claim 1 wherein the assembly is swivelably connected to the carrier by an attachment system.

17. (New) The assembly of claim 1 further comprising one of a test plug and a protection module inserted into a module on the front side of the assembly.
